Drug Therapy Problem Identification (weighting: 20%)	Major actual and potential drug-therapy problems are omitted, not accurately identified and/or not appropriately stated.		All major and most minor actual and potential drug-therapy problems are identified correctly but may be imprecisely or awkwardly stated.		All major and minor actual and potential drug-therapy problems are accurately identified and precisely and clearly stated.			0
Goals of Therapy (weighting: 10%)	Goals of therapy are absent or incorrect; are unrealistic or difficult to measure; or timeframes for achieving goals are absent.		Goals of therapy are set for most indications of drug therapy; and are observable, measurable and realistic. Timeframes for achieving goals may be present but may be vague or unrealistic.		Goals of therapy are set for every indication of drug therapy; are observable, measurable and realistic; timeframes for achieving the goals are present, realistic and specific.			0
Therapeutic alternatives (weighting: 15%)	Therapeutic alternatives are not stated or are inappropriate for one or more DTPs. When more than one therapeutic alternative is stated, the pros and cons of each alternative is either not discussed for some DTPs or is significantly inaccurate or incomplete.		Therapeutic alternatives are stated for all DTPs, but some may not be completely reasonable. When more than one therapeutic alternative is stated, the pros and cons of each alternative is discussed on the <i>Therapeutic Alternative Worksheet</i> , but discussion is slightly inaccurate or incomplete.		All reasonable therapeutic alternatives are stated for all DTPs. When more than one therapeutic alternative is stated, the pros and cons of each alternative is accurately and completely discussed on <i>Therapeutic Alternative Worksheet</i> .			0
Interventions (weighting: 30%)	Interventions are not appropriate; best available evidence or important medical and patient issues are not considered or incorporated.		Interventions are appropriate, clear, incorporating the best available evidence and most relevant patient medical and personal issues.		Interventions are appropriate, specific, solution-focused, incorporating the best available evidence and all relevant patient medical and personal issues			0
Schedule and Plan for Follow Up (Weighting: 20%)	Relevant parameters for assessing effectiveness and safety of the care plan are absent or incorrect; a schedule for follow up is not present or is inappropriate.		The plan for follow up contains most relevant parameters for assessing effectiveness, safety and adherence to the care plan; a schedule for follow up is present but may be vague or unrealistic.		The plan for follow up contains all relevant and appropriate parameters for assessing effectiveness, safety and adherence to the care plan; a schedule for follow up is present and appropriate.			0
Responsibility and Collaboration (Weighting: 5%)	Responsibility for who is implementing the interventions and monitoring is not indicated or is inappropriate. Collaboration with the pt, prescriber or other health providers that is required to effectively implement the care plan is not addressed at all or is not apparent.		Responsibility for who is implementing most interventions and monitoring is implied but may not be clearly indicated. Collaboration with the pt, prescriber and other health providers that is required to effectively implement the care plan is addressed, but is either somewhat vague or incomplete		Responsibility for who is implementing all interventions and who is performing each monitoring parameter is appropriate and clearly indicated. Collaboration with the pt, prescriber and other health providers that is required to effectively implement the care plan is clearly apparent.			0
Cultural Competency (weighting 0%)	The care plan does not address concerns related to culture and/or patient beliefs. No education or counseling is documented within the recommendation or follow up plan.		Culture and/or patient beliefs are acknowledged within the care plan. Education and/or counseling to overcome misconceptions is stated but not thoroughly described.		Culture and/or patient beliefs are acknowledged and described within the care plan. Interventions to overcome misconceptions (eg. Education, counseling) are thoroughly described, including follow up.		Final Score out of 13 for this care plan	0
