Walking a Mile in our Learners’ Cyber Shoes: Transitioning to Teach Online

Marlene Johnshoy & Frances Matos-Schultz, University of Minnesota

Teachers who are tasked with teaching online are faced with vastly different curricular demands and considerations from what they are used to in traditional face-to-face environments. Many teachers are expected to create and deliver courses with no experience and little or no support. In the push to move the classroom experience online, the fact that the delivery of face-to-face and online teaching is not the same, is lost in most of these conversations. In response, the presenters developed an online professional development course where participants both experienced online learning as students and applied the lessons learned in transitioning their face-to-face courses online. For five years, CARLA at the University of Minnesota has received funding to develop an online STARTALK course that helps less commonly taught teachers start the transition to online teaching. Presenters will explain the choice for the delivery format (experiential orientation), including a unique lab component - an online language lab designed to give teachers first-hand experience of the challenges faced by an online learner.
